**INFINITY (includes Kasala)**

**Status:** Exploring.

**Location:** Between Lubumbashi and Likasi.

**Commodities:** Copper.

**Ownership:** [EL NINO VENTURES INC](#) earning 70% through Infinity Resources SPRL (operator); [GCP GROUP LTD](#) 100%.

**Comment:** Infinity comprised four mineral research permits covering 352 km2. El Nino Ventures Inc had the option to acquire a 70% interest in the Infinity licences from GCP Group Ltd (GCP). At late 2010, El Nino had one payment remaining to acquire its interest, but ongoing legal proceedings between the companies had delayed finalisation of the agreement. Drilling within the northern licence (permit 5214) of the Infinity project in 2008 and subsequent soil surveys had previously caused El Nino to focus its exploration in this area, referred to as the Kasala prospect. Early drilling in Kasala Block A confirmed copper mineralisation including results of 3.5% Copper (Cu) over 10m and 2.82% Cu over 29m. In March 2010, El Nino announced the results of a Soil geochemical sampling program for targets southeast of Kasala Blocks A, B and C. In addition a high order copper anomaly had been detected in a new zone referred to as the Kasala Western Extension. No further exploration had been undertaken up to late July 2010. The Infinity project (including the Kasala prospect) was put on care and maintenance until the resolution of litigation between El Nino and its JV partner GCP. Upon the resolution of these issues the company expected to undertake further drill programs.
